Figure 9 shows the results of the experiment. The y-axis represents the Anti-TT GMT (IgG) on a logarithmic scale from 10¹ to 10⁵. The x-axis shows four groups: none, 10µg #1826, 100µg #1826, and 100µg #1982. For each group, two bars are shown: IgG1 (solid black) and IgG2a (cross-hatched). Error bars are present for all data points.
